<u>Class xi</u> <u>Computer Science</u> <u>FUNDAMENTALS</u>

- 1. What are data types?
- 2. In what categories data types are divided?
- 3. Define a variable
- 4. Differentiate between declaration, definition and initialization of a variable.
- 5. Define a constant
- 6. Differentiate between 1, '1', "1"
- 7. Give examples of integer, float, character and string constant
- 8. Why is char often treated as integers?
- 9. Can integer value be stored in float variables and vice versa?
- 10. Can char be stored in int variables and vice versa?
- 11. What is #include called and why?
- 12. What are various types of operators
- 13. Differentiate between unary, binary and ternary operator
- 14. How is postfix operator different from prefix? Which has higher priority?
- 15. Give the priority of all operators?
- 16. What is the difference between = and = = ?
- 17. Differentiate between simple and compound statements.
- 18. What are put in and get from operators?
- 19. Differentiate between syntax, logical and runtime errors.
- 20. What is the difference between keyword and identifier?
